

MD UMAIR UZ ZAMAN

GENERATIVE AI ENGINEER | AGENTIC AI | AI AGENTS | AI AUTOMATION

Bengaluru, India • +91 8050458266 • mdumairzama@gmail.com • linkedin.com/in/umairzama • github.com/umairzaman05

PROFESSIONAL SUMMARY

AI Engineer specializing in Generative AI, LLM applications, AI agents, agentic workflows, workflow automation and AI-assisted software development, with a strong Product Management foundation. At **The Binary Labs**, the AI-focused division of The Binary Holdings, I design and develop practical AI automation solutions, internal enterprise workflows and intelligent quality-engineering systems. Current work includes **WaveGuard**, an AI-powered Quality Engineering platform for automated mobile/web regression testing, evidence collection, AI-assisted failure analysis and reporting. Working knowledge of Python, REST APIs, FastAPI, LangGraph, LangChain, n8n, Docker and Git, with hands-on use of OpenAI, Claude and Gemini ecosystems.

CORE AI & ENGINEERING SKILLS

Generative AI & LLM: Generative AI, LLMs, LLM Applications, Prompt Engineering, AI Agents, Agentic AI, RAG Concepts

AI Automation: AI Workflow Automation, Agent Orchestration, Workflow Design, AI-assisted Development, Intelligent QA Automation

AI Platforms: OpenAI, Claude, Gemini

Frameworks & Tools: LangGraph, LangChain, n8n, Git, Docker

Programming & APIs: Python (Working Knowledge), SQL, REST APIs, FastAPI (Working Knowledge)

Quality Engineering: Playwright, Appium, API Testing, E2E Testing, Computer Vision, OCR, Root Cause Analysis

Cloud & Data: Google Cloud Run, PostgreSQL, Redis, Cloud Storage

Product & Delivery: Agile, Product Strategy, System Design, Requirements, Stakeholder Management

PROFESSIONAL EXPERIENCE

AI Engineer - The Binary Labs (AI-focused division of The Binary Holdings) | Jul 2026 - Present

- Design and develop AI-powered automation solutions, enterprise workflows and LLM-enabled applications for internal business use cases.
- Design agentic and multi-agent workflows, prompt strategies and AI solution architectures, translating operational requirements into executable automation.
- Use AI-assisted software development to accelerate implementation, debugging and iteration while maintaining an understanding of application architecture, APIs and workflow logic.
- Drive the design of **WaveGuard**, an AI-powered Quality Engineering platform that automates end-to-end regression testing across Android, iOS and embedded PWA deployments.
- Define intelligent QA workflows covering execution, navigation, vision, transaction validation, evidence capture, network observation, failure analysis, reporting and workflow learning.
- Integrate automated execution concepts using **Appium + Playwright**, with AI capabilities including computer vision, OCR, root-cause analysis, recommendations, RAG and learning workflows.
- Design evidence-driven QA outputs including video, screenshots, API/console/network logs, performance metrics, AI summaries, root-cause suggestions, execution timelines and reports.
- Work with Product, QA, Engineering and DevOps stakeholders to translate requirements into scalable, cloud-ready AI automation solutions.

Associate Product Manager - The Binary Holdings | Nov 2022 - Jun 2026

- Led end-to-end product lifecycle for Fando, Spin It, BNRY Mart, ngage, BNRY Games and UPlay across roadmap planning, requirements, delivery and iteration.
- Owned requirement gathering, stakeholder management, prioritization and cross-functional execution with Engineering, Design and Business teams.
- Improved product engagement through experimentation, analytics and data-driven decision making.
- Worked in Agile delivery environments and translated business problems into product requirements, workflows and system-level solutions.
- Built strong domain expertise across a large-scale digital ecosystem, providing the product and operational foundation for the transition into AI engineering.

Product Analyst - Lulu Group International | Apr 2021 - Sep 2022

- Supported product optimization for Lulu India's online platform through user research, analytics and KPI tracking.
- Improved checkout workflows and operational efficiency by identifying product and process opportunities.

SELECTED AI / AUTOMATION PROJECT

WaveGuard - AI-Powered Quality Engineering Platform

Purpose: Internal enterprise platform designed to transform repetitive manual regression testing into intelligent, scalable and continuously improving quality validation across white-label applications embedded in multiple Telco applications. The architecture combines an AI Orchestrator, execution queue, Appium/Playwright automation, Vision/OCR, Evidence Engine, Network Monitor, Reporting Engine, PostgreSQL, Redis and cloud storage. AI capabilities include multi-agent orchestration, computer vision/OCR, root-cause analysis, recommendation engine, self-healing locators, workflow learning and RAG-based knowledge retrieval.

Scope: Android, iOS, PWA, cloud/local/emulator execution, parallel testing, video and screenshot evidence, dashboards, reporting, historical analytics, scheduling, Telco registry and continuous monitoring.

EDUCATION

Bachelor of Computer Applications (BCA) - Cloud Technology & Information Security | Jain University | 2017 - 2020

CERTIFICATIONS

- Product Management - Growth School
- Digital Marketing - Learn Digital Academy

ADDITIONAL INFORMATION

Professional focus: Generative AI Engineer, AI Engineer, Applied AI Engineer, AI Automation Engineer, AI/LLM Engineer, Agentic AI Engineer, AI Solutions Engineer, AI Quality Engineering / QA Automation.

Development approach: AI-assisted software development with working knowledge of Python, APIs and modern AI tooling; focused on designing, orchestrating, validating and delivering practical AI systems rather than positioning as a traditional deep software-engineering or ML-research specialist.
